Maiers GP, Hasan SS. Question 14: A 16-year-old hockey player has a collision with his arm forcibly extended. A magnetic resonance imaging scan reveals a lesser tuberosity fracture with 2-3 mm of elevation and 2mm of medial displacement. Is this due to the apophysis of the lesser tuberosity? And how do you diagnose and manage traumatic fractures of the lesser tuberosity of the humerus? In: Nicholson GP, Provencher MT, eds. *Curbside Consultation of the Shoulder: 49 Clinical Questions.* Thorofare, NJ: Slack Inc; 2008:61-64.
